

What I claim as my invention is:

1. A hollow pipe comprising of PVC, metal, or iron with a spring inside of the pipe.
2. The apparatus of claim #1 further including a rope, rod or chain fastened to the spring.
3. I further claim a single-piece of pipe (spring inside) held in hand or permanently adapted on motors. It can/will start pull-type engines. It can either be a permanent device welded on the motor or a single piece of pipe held in one's hand for hand/foot operation.
